EXPERIENCE

TWALA, Taguig City, PH — *Senior Backend Developer*

OCT 2020 – MAY 2026

- Deployed **Advance.AI** eKYC identity verification, enabling automated customer onboarding and reducing manual verification workload.
- Collaborated on building **eGovDocs**, the official e-signature platform of the Philippines, now integrated into the eGov PH App, enabling millions of Filipinos to securely sign government documents online.
- Integrated **Xendit** payment links and subscription billing, streamlining recurring revenue collection for multiple product lines.
- Engineered a serverless **AWS Lambda** function to automatically remove backgrounds from user-uploaded signature images, storing results in **S3**. Improved signature clarity and consistency for millions of Filipino users while using **Docker** to containerize and streamline backend deployments.
- Used AI tools (**Claude Code**, **GitHub Copilot**) to streamline code reviews and test generation, cutting routine development tasks by ~50% and freeing time for high-impact work.
- Maintained **Stripe** and other billing service integrations, ensuring reliable processing of customer payments and subscription changes.
- Architected a dynamic admin portal for monitoring user data and document usage, giving internal teams real-time visibility into platform activity.
- Engineered RESTful APIs and server-side logic in **Node.js** to support core product features and third-party integrations.
- Integrated **PDFtron** into document processing workflows, enabling in-app viewing, annotation, and manipulation of user documents.
- Authored unit and functional tests that improved system reliability and reduced regression issues across releases.
- Spearheaded code reviews and refactoring initiatives that improved code quality, structure, and long-term maintainability.

CPE Games Ltd, Malta — *Senior Backend Developer (Part-time)*

JUN 2021 – OCT 2023

- Engineered admin portal endpoints for game features such as friend/rival interactions and experience/reward point accrual, improving player engagement tracking.
- Deployed a secure in-game payment processing system using **Nuvei**, enabling reliable monetization of in-game purchases.
- Authored new assets and game levels in **Unreal Engine**, expanding game content and player retention.
- Collaborated to program a poker bot to simulate human-like gameplay strategy and provide a challenging experience for players.

WTECH Solutions Inc, Makati City, PH — *Backend Developer*

FEB 2018 – APR 2020

- Architected user authentication and authorization systems, securing access to application resources.
- Engineered core application features using **Node.js**, supporting reliable backend operations.
- Applied object-oriented design principles to build reusable modules, improving integration speed across application components.

iParent Portal Inc, Caloocan City, PH — *Full Stack Developer*

MAY 2017 – DEC 2017

- Integrated **DragonPay** as a payment method, enabling online payment collection for the platform.
- Designed and deployed an automated **cron**-based data pipeline for attendance logging, exporting full records to archival CSVs and auto-truncating tables to reduce manual ops work and maintain optimal database performance.
- Engineered an RFID-based login and food purchase system for a school canteen, enabling cashless transactions for students.

4th Shift Global, Makati City, PH — *Jr. Web Developer*

DEC 2016 – MAR 2017

- Crafted responsive user interfaces using **HTML, CSS, and JavaScript**, improving usability across devices.
- Collaborated with senior developers to implement and integrate front-end components into production features.
- Leveraged **Git** for version control, supporting effective team collaboration and code tracking.
- Engineered server-side scripts with **CodeIgniter**, supporting backend functionality for client projects.

PROJECTS

Portfolio AI Assistant, Personal Project

- Built a floating AI chatbot integrated into my portfolio site, allowing visitors to ask questions about my experience, skills, and projects in natural language.
- Implemented a RAG pipeline using **Supabase (pgvector)** to retrieve context from my resume and LinkedIn profile, ensuring responses stay grounded in live data while using Groq's prompt-prefix caching to reduce cost.
- Implemented rate limiting via request limits, streaming responses, and a persistent chat UI using **React.js**.

Project Paw, Passion Project

- Developing a souls-like metroidvania in **Unity and C#**, inspired by Dark Souls, Hollow Knight and Nine Sols. Currently in playable prototype stage.
- Implemented a combat system with combo, skills, and parry, tuned for tight, punishing melee encounters.
- Built an interconnected map with metroidvania-style gated progression.
- Engineered enemy AI using state machines for patrol, aggro, and attack pattern behaviors.
- Built a checkpoint/save system inspired by bonfire mechanics, preserving player progress and world state across sessions.

SKILLS

Web: HTML/CSS, JavaScript, TypeScript, Bootstrap, Tailwind CSS, React.js, Vue.js

Backend: PHP, Python, Node.js, Laravel, CodeIgniter, Sails.js, Express.js, Adonis.js, MySQL, PostgreSQL, MongoDB, WebSocket, Redis, Supabase

Cloud / DevOps: AWS (S3, Lambda), Docker

Game Development: C#, Unity, Unreal Engine

AI Tools: Claude, Claude Code, GitHub Copilot

CERTIFICATIONS

Creating an RPG in Unity
